In admin case (Restaurant Management)	In Customer Case (End User)
a. Dishes Details Manager b. User Details Manager c. Booking Details Manager d. Tracking e. Feedback Manager	a. User's Booking details b. Tracking c. Foods and Tables Details d. Personal Profile e. Feedback

This project related organizations are like
Online Shopping, Bus Booking, Hotels … etc

Design and Implementation:

Git Commands:

  I.   git –version
  II.   git config --global user.name "Your Name"
  III.   git config --global user.email <your email address>
  IV.   git config –list
  V.   git init
  VI.   git status
  VII.   git add . (dot)
  VIII.   git commit --m "message"
  IX.   git log --oneline
  X.   git checkout <second commit's number> index.html
  XI.   git reset HEAD index.html
  XII.   git checkout -- index.html
  XIII.   git remote add origin "bitbucket url"
  XIV.   git push origin master
 XV.   git clone <repository URL>

NodeJS Installation: -

  I.   Install latest nodejs from https://nodejs.org/en/
  II.   Check npm version using npm --v
  III.   Check node version using node –v
  IV.   Install lite-server also

     a. npm install lite-server –save-dev
 V. Open the confusion folder in cmd prompt
 VI. Install NPM Modules using npm install or npm i
VII. Install reactstrap

Redux & Json-server Installation: -

  I. Install npm redux package
  II. Create json-server folder in project directory
 III. Run the json-server package and also paste the images folder init.
 IV. Install json server using "json-server --watch db.json -p 3003 d-2000"
  V. Also paste the images folder it.

http://www.euphoriahotels.in/

Conclusion :

In general, reactstrap helps lot to make easier to complete the project

Also, I used **git** for commit my every exercise and assignment and keep track my changes.

Learned package manager (**NPM**), Redux, Json-server .etc.

Thanks to Instructor **Jogesh K. Muppala** and all my classmates (Peers)
